Education

Miami University	2026–2027
M.A. in Economics (expected)	
Miami University	2022–2026
B.S. in Business Economics, Minor in Mathematics (<i>with honors</i>)	

Fields of Specialization

Industrial Organization, Market Design, Health Economics

Working Papers

Labor Input Responses to Ownership Changes: Evidence from U.S. Nursing Homes (with John Bowblis and Charles Moul)

Ownership changes are common in U.S. nursing homes, yet their implications for care production remain unclear. Using administrative panel data from the Centers for Medicare and Medicaid Services (CMS) from 2017 to 2024, we study how ownership changes affect nurse staffing, the core input to nursing home care production. We identify control-changing ownership changes and estimate effects using a staggered-adoption difference-in-differences event-study design. We find that ownership changes lead to persistent declines in staffing, concentrated in registered nurses, certified nursing assistants, and total nursing hours per resident day, with little adjustment in licensed practical nurse staffing. Importantly, effects are substantially larger among facilities that are not chain-affiliated and before the COVID-19 pandemic. These patterns indicate that staffing is a central adjustment margin following ownership changes in a regulated setting with limited short-run pricing flexibility, suggesting that consolidation can affect resident welfare through internal production decisions even when facilities remain open.

Work in Progress
